

Warranty of Avery Dennison® Films

Instructional Bulletin #1.30 (Revision 8)

Dated: 03/23/17

1.0 Scope

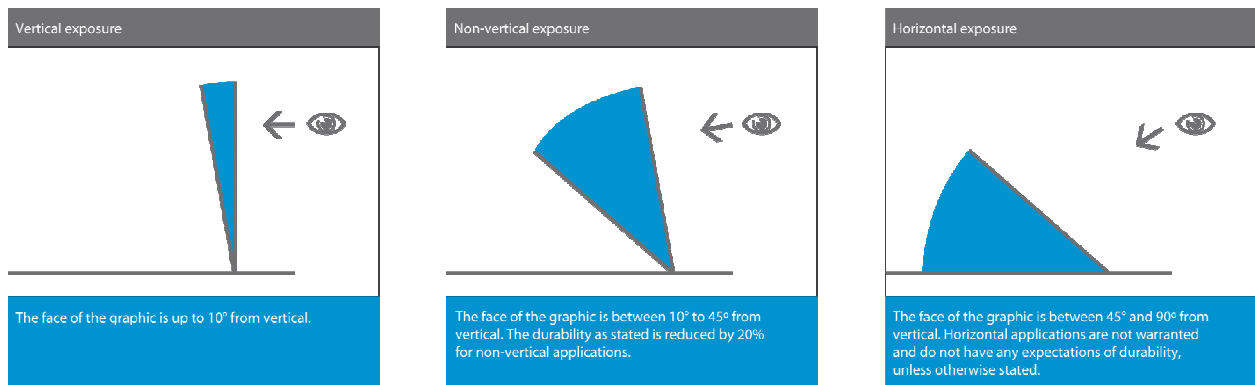

This instructional bulletin describes the conditions and circumstances that would impact the warranty on Avery Dennison's film. See the applicable product data sheet for specific warranty information.

2.0 Reduction of Warranty Expectations

In the event of exposure in desert situations, or within areas considered high UV exposure, the warranty will be reduced from the information provided in the appropriate Product Data Bulletins, and Instructional Bulletins. Based on the Zone Chart (shown on page 2) Warranty in regions located in Zone 1 will perform in vertical applications as specified in the Product Data Bulletin. Materials used in regions identified in Zone 2 will have a reduction of the specified warranty length by 20%, and those used in Zone 3 regions will have a 60% reduction in warranty length. In the event the product is exposed to multiple zones the warranty will be reduced based on the largest reduction.

The warranty will be reduced if the product is exposed other than vertical. The definition of vertical exposure is $\pm 10^\circ$ of vertical; a non-vertical exposure in an application is where a film is applied to a surface that is $10\text{-}45^\circ$ from vertical. The reduction of warranty for non-vertical applications is 20% less than the published vertical warranty for a specific product.

If a product is applied non-vertically and is exposed to Zone 2 or 3, the warranty will be reduced by the sum of the applicable zone and orientation reductions. For example, a non-vertical product in zone 2 is reduced by 40% (20% reduction for non vertical + 20% reduction for zone 2).
